

Amendments to the Specification:

Please insert the attached sheet after the claims, as new page 13. This page contains the following text of the original Abstract as printed on the front page of WO 2005/007088, the published parent application PCT application PCT/US2004/021305. No new matter is introduced by way of this amendment.

ABSTRACT

A method of making a red pigmented composition is disclosed which includes (a) preparing an aqueous extract of *Garcinia* indica fruit comprising at least one red colorant; (b) treating the extract with a cation exchange resin so that one or more red colorant associates with the resin; (c) eluting the red colorant from the resin with an eluting solution containing one or more alcohol such as methanol, ethanol and isopropanol and one or more acid such as hydrochloric acid, citric acid, acetic acid, tartaric acid and hydroxy citric acid to yield a red-colored eluate; (d) collecting and concentrating the eluate to provide a concentrate; and (e) adding an antioxidant agent and/or placing the concentrate in an aseptic container in a non-oxidizing atmosphere. A combination comprising the resulting stabilized *Garcinia* extract in aseptic packaging in a non-oxidizing atmosphere is also disclosed, along with methods of use.
